

Methven Re-affirms Satinjet Technology as Leading Edge

Methven says it intends to defend a prosecution the Commerce Commission intends to bring against it under the Fair Trading Act for allegedly making misleading claims in advertising relating to the extent of water savings achieved by its Satinjet twin jet showerware technology over conventional showers.

International Awards Recognise Satinjet Technology

A raft of prestigious international awards confirm Methven's flagship Satinjet technology delivers a luxury showering experience at lower flow rates. Awards for Satinjet include:

- Australian International Design Award 2008 and 2009
- UK Waterwise Marque for water efficiency 2008 and 2009
- Chicago Athenaeum Good Design Awards for Product Distinction 2008 and 2005
- Master Plumbers' Industry Support Award 2009
- Australian Consumer Association's 'people's choice' 2007
- Australian Water Smart Champion and Best Practice Green Globe Award 2005
- Australian Green Plumbers Innovative Product of the Year 2005

No Material Impact on Company

Methven says that while it has not yet seen the proceedings by the Commission, it does not expect a material financial impact on the company.

Methven Stands By Integrity of Satinjet

Satinjet showers, fitted with the appropriate flow restrictors, do deliver a superior shower experience and produce the water and energy savings claimed when compared to conventional showers run on mains pressure provided the flow rate of the conventional shower is 20 litres per minute. The Commission did not question Methven's findings in this respect.
